TRADE FAIR FOR WOODEN BUILDINGS AND WOOD PROCESSING IN BUILDING INDUSTRY

SUSO

COMPETITION OVERVIEW OF BUILDING CRAFTS

FINAL
REPORT

PVA
EXPO PRAGUE

www.pvaexpo.cz

7.-9. 2. 2019

The seventh edition of the Trade Fair for Low-energy, Passive and Zero-energy Buildings “FOR PASIV” has registered a large growth of interest among both exhibitors and visitors this year again. This was supported in a significant way also by the “FOR WOOD” Trade Fair where more than 70 firms were presenting their products and services this year. The offer of wooden buildings and constructions enjoyed a large interest on the part of visitors, and the trade fairs together created an integrated offer of cost-efficient living.

This trade fair combination will feature a great innovation in 2020, namely extension by the FOR THERM Trade Fair. Its specialisation will be stoves, fireplaces and boilers and this way it promises satisfaction of demand from this sector on the parts of exhibitors and investors.

Already now, visitors can look forward to a comprehensive offer of state subsidy programmes for support of low-energy living, to specific-topic lectures, free-of-charge advisory centres, where they will have an opportunity of personal implementations and consultations regarding their ideas directly with professionals, and also to complete representation of firms from all segments of low-energy and passive constructions.

The year 2020 associated with application of requirements for buildings with almost zero energy consumption is inexorably approaching, which means that the ways of common constructions and those of passive houses meet each other. Our aim is to satisfy both the general and professional public, and in cooperation with our exhibitors and professional partners to ensure all important information, necessary inspiration and new technologies on the occasion of the trade fair.

We are looking forward to seeing you in 2020 again!

INAUGURATION OF THE FAIRS

FOR PASIV FOR WOOD

The ceremonial inauguration of the set of the trade fairs took place at participation of Richard Brabec, Minister of the Environment; Vojtěch Petráček, Rector of the Czech Technical University in Prague; Marcela Pavlová, Deputy Minister for Regional Development; Petr Valdman, Director of the State Environmental Fund; Karel Havlíček, Chairman of the Board of Directors of the Association of Small and Medium-Sized Enterprises; and Jitka Šefránková, Director of Roofs Prague. Pavel Sehnal, Chairman of the Board of Directors of ABF, a.s., took part in this ceremony on behalf of the trade fair hosting company. The introductory words and ceremonial cutting of the ribbon were followed up by common visits to selected expositions, which was attended by other guests as well – among others also Petr Serafín, Director of the Department of the Building Industry and Building Materials, and Roman Pommer, Vice President of the Czech Chamber of Commerce.

GALA EVENING

The social meeting of exhibitors, business partners and VIP guests was held on the first day of the trade fair in the evening, directly on the premises of the Entrance Hall II. Besides a rich buffet party, the programme included also a performance of the music group "Klasickéj pos-tup". It was possible to document pleasant moments from this social event in the SmyBox photo corner, and high-quality Moravian wines were served by the Procházka wine making company.

Number of exhibitors: **159**
 Number of foreign exhibitors: **3**
 Number of countries: **4**

Net exhibition area (in sq m): **8 570**
 Number of exhibitors: **25 360**
 Number of accredited journalists: **86**

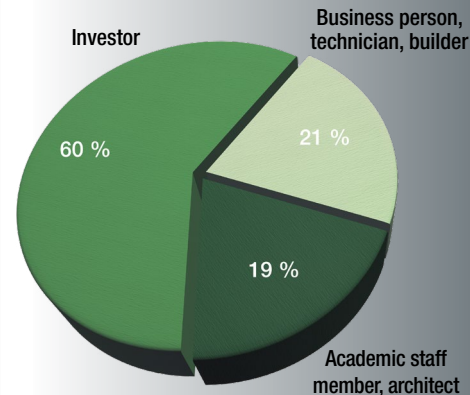

PLACE OF RESIDENCE

REASON FOR VISITING

VISITOR OF TRADE FAIR

As a regular participant and active exhibitor of the FOR PASIV Trade Fair we appreciate this event and together with the FOR ARCH Trade Fair we consider it to be a contact milestone, interconnecting investors, suppliers and educational organisations in the building industry in our country. We appreciate that wide groups of visitors can be made familiar with the issues of materials, technologies and development ideas of our sector and we try to get actively involved in this discussion by sharing our experience, whether directly on the presentation area of trade fair halls or through participation in lecture sessions. We take part in the actual event also due to the possibility of meeting and communication with other colleagues, experts with common objectives, moving the limits of comfortable living, using new available technologies and optimising proposals for facilitation of the life of users of passive or low-energy houses. We are glad to see that the FOR PASIV Trade Fair uses this form not only for presenting a product of building evolution, but also enables us to show the living style to visitors, possible directions of their ideas associated with cost-efficient and functional living. On behalf of the entire team of the ProjektyDomů company, we would like to express our thanks to the ABF organising company for this well-managed project and we would like to wish the actual trade fair to have other successful years and to continue as an objective venue with regard to hard competition on the building market, and to be an inspiring event and the place fulfilling people's wishes and dreams about living.

Ing. arch. Lubomír Korčák | ProjektyDomů s.r.o.

Our company was filing its application for participation in the FOR WOOD Trade Fair with slight concerns because on a long-term basis we have been using different channels for promotion of family houses. I was surprised very pleasantly by the organisation and entire course of the trade fair. The first day is usually somehow worse in terms of the number of visitors, but it was not the case of this trade fair at all. For all the time we were answering questions of visitors at our stand and I hope that these visitors will become our clients quite soon. On Saturday we even had to increase the number of business representatives at the stand so that we could be able to respond to all the questions. On the whole, I evaluate the FOR WOOD Trade Fair very positively and I am looking forward to another edition of the event.

Ing. Michal Řehulka, Family House Sales Manager | Haas Fertigbau Chanovice s.r.o.

ACCOMPANYING PROGRAMME OF THE FOR PASIV AND FOR WOOD TRADE FAIRS PROVIDED ADVICE CONCERNING BOTH CONSTRUCTIONS AND SUBSIDIES

The visitors coming to the FOR PASIV and FOR WOOD Trade Fairs had an opportunity of using advice provided free of charge at advisory centres across various sectors. For example, the FOR PASIV Advisory Centre in Hall 2, which was organised with the professional partner (Passive House Centre), helped with ideas and plans for living or renovations. It was possible to ask advice from many experts specialised in passive houses and working in various sectors – architects, designers, civil engineers, energy advisors, ventilation experts, air tightness experts, experts specialised in subsidies and financing.

Those interested in wooden constructions could use services offered at the FOR WOOD Trade Fair by the advisory centre bearing the same name. Advice was provided by Ing. arch. Klára Čísařovská and Ing. arch. Štěpán Svejkovský from the Mooza architecture atelier or by Ing. Renata Böhmová and Ing. Pavel Nováček from the 2PROJEKTANTI office.

It was possible for those interested to obtain precious advice also during a number of seminars and lectures which they could visit free of charge and which were held within the framework of the trade fairs on a daily basis in Hall 2, Lecture Room 5 and at the DEKWOOD Centre in Hall 2D.

On Saturday it was possible to visit a series of lectures held under the auspices of the Association of Prefabricated Building Suppliers in the Lecture Room no. 6. The accompanying programme dedicated mostly to the general public presented wooden constructions as environment-friendly houses featuring good energy performance.

SUSO 2019 - COMPETITION OVERVIEW OF BUILDING CRAFTS

The 23rd edition of the competition overview of building crafts known as SUSO found its winners of the first qualification round. Students of specialised schools in the bricklayer and joiner branches were fighting for the victory within the framework of the FOR PASIV and FOR WOOD Trade Fairs held on 7–9 February 2019 at the PVA EXPO PRAGUE Exhibition Centre.

This battle of secondary schools within the SUSO qualification round was attended by promising future craftsmen of the bricklayer and joiner branches from six schools. The competition of talented students lasted for the whole two days in Hall 6 and was watched not only by the Expert Jury, but also by trade fair visitors.

As it was clear from the fights of the qualification round, it is still possible to find people who are good with their hands, in spite of the fact that Czech trades and crafts are facing a shortage of labour force. “We were highly pleased by participation of six teams of joiners, which is an interesting number with regard to the fact that it was the first qualification round. In the case of the bricklayer branch it was obvious that its apprentices would need still more motivation for participation in this demanding competition,” said David Surmaj, organiser of the competition overview.

COMPETITION

Passive houses are the most modern constructions of these days. They are constructed in a high-quality manner, are environment-friendly and have health benefits for their inhabitants. The number of these buildings constructed every year in the Czech Republic achieves several hundreds, which is the case of energy-saving buildings as well. But there is a question – Which of them are the best ones?

The competition overview “Passive House 2018” looks for, maps and values cost-saving houses in the territory of the Czech Republic. And this concerns not only zero, passive or low energy-demand buildings, family houses, residential buildings, administrative buildings, but also for example schools or nursery schools. We evaluate brand-new houses as well as newly renovated buildings upgraded into the energy-saving class. The aim is to make the general public familiar with modern Czech constructions of the 21st century and to highlight the best energy-saving buildings of these days.

The Expert Jury assessed the architecture, construction, technical and technological designs of buildings. Then the public assessed goodness and impressions. The Jury chose the winner for the General Partner’s Award, Main Media Partner’s Award and the Jury’s Award in the Green New Construction and Green Renovation categories. Altogether 32 new constructions (17 of which being family houses) and 35 renovations (5 of which being family houses) got registered into the competition overview, and the buildings which are not family houses are other types of energy-saving constructions.
